COLEMAN M.E., PAN Y.-C.E., ETHERTON T.D.;

BIOCHEM. BIOPHYS. RES. COMMUN. 181:131-1136(1991).

FIT FUNCTION: IGF-BINDING PROTEINS PROLONG THE HALF-LIFE OF THE IGFS AND HAVE BEEN SHOWN TO EITHER INHIBIT OR STIMULATE THE GROWTH PROMOTING EFFECTS OF THE IGFS ON CELL CULTURE. THEY ALTIER THE INTERACTION OF IGFS WITH THEIR CELL SURFACE RECEPTORS.

SUBUNIT: FORMS A TERNARY COMPLEX OF ABOUT 140 TO 150 KD WITH IGF-I OR IGF-II AND A 85 KD GLYCOPPOTEIN (ALS).

BINDS IGF-II AND A 85 KD GLYCOPPOTEIN (ALS).

SUBCELLULAR LOCATION: EXTRACELLULAR.

SIMULARITY: BELONGS TO THE INSULIN-LIKE GROWTH FACTOR BINDING DEDOTRON EARLY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nucleic search, using sw model

for beta-IG-M
          8888
Claim 1; Page 42-43; 61pp; English.
A cDNA clone (T34991) codes for human vascular insulin-like growth factor binding protein-like growth factor (R98994), or VIGF, a protein structurally related to the IBP and CCN
```

Result No.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               families. It was discovered in a cDNA library derived from hum umbilical vein endothelial cells. The cDNA can be used for prodn. of recombinant VIGF, e.g. by expression in E. coll, CHO or insect host cells. It is also useful therapeutically e.g. to treat muscle wasting diseases or osteoporosis, or to design probes for the detection of diseases associated with under-or over-expression of VIGF.

TIGF-beta induced gene family - encodes proteins involved in growth and differentiation effects of TGF-beta-1

SC Claim 7; Fig 2; 35pp; English.

CThe DNA encoding mouse beta-IG-M2 was obtd. from AKR-2B mouse cells induced with TGF-betal and cyclohexamide. Poly RNA extracted from these cells was used to create a cDNA library which was screened cusing two probes. The probes were prepd. from untreated AKR-2B mRNA cand AKR-2B mRNA from cells treated with cyclohexamide and TGF-betal. Hybridising colonies were isolated and two clones (beta-IG-M2) were then sequenced. The DNA encodes proteins that have a 80 and 50 percent homology respectively with the CEF-10 protein induced by v-src in chicken embryo fibroblasts. The proteins encoded by TGF-beta induced genes are likely to be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

The human orthologue of Fispl2 is connective tissue growth factor. Fispl2 polynucleotides can be used for the production of Fispl2 polynucleotides can be used for the production compositions are provided that comprise mammalian ECM signalling molecules, peptide fragments, inhibitory peptides capable of interacting with receptors for ECM signalling molecules, and antibody products. Further provided are methods for using mammalian ECM signalling molecules to screen for, and/or modulate disorders associated with angiogenesis, chondrogenesis and to propagate blood products are also recycled.

                                                                                                                                                                                                                                   Mucleotide sequences hybridising to regions of chicken nov gene - was full as probes for detecting complementary sequences to revaluate development and/or differentiation of tumours Claim 2; Page 27; 67pp; French.

The chicken nov gene is stimulated in avian nephroblastoma induced by avian myeloblastoma virus but not in normal adult kidney. A clays po cDNA sequence was isolated from a gene bank prepared from chicken embryonic fibroblasts screened with a tumour-derived probe. Fragment III is derived from the 2nd. exon of the nov gene; nucleotide sequences which hybridise to Fragment III under stringent conditions (i.e. 50% formamide, 5 x SCC) are claimed. The claimed conditions of i.e. 50% formamide, 5 x SCC) are claimed. The claimed conditions of the sequences which hybridise to Fragment III under stringent sequences preferably encode a protein with at least 70% homology to Sequence 230 BP; 18 A; 89 C; 97 G; 26 T;

C A CDNA clone (T04226), designated DB60732, codes for human connective tissue growth factor (CTGF) (R79964), a protein that connective tissue growth factor (CTGF) (R79964), a protein that cells and which binds to the platelet-derived growth factor (PDGR) receptor. The cDNA was obtd. from a library of human cumbilical vein endothelial cell cDNA in vector lambda gtll by screening with an anti-PDGF antibody. The cDNA is useful for prodn. of recombinant CTGF or in the design of antisense or cribozyme constructs used to treat disorders associated with covergrowth of tissue cells, such as cancer, fibrotic diseases and atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PT proliferative disease

PS Claim 10; Column 15-18; lipp; English.

CC This sequence represents the cDNA encoding the human connective tissue

CC growth factor (CTGF). CTGF is related immunologically and biologically

CC to platelet-derived growth factor (PDGF), but is encoded by an unrelated

CC gene. CTGF is thought to play a significant role in the normal

CC development, growth, and repair of human tissue, similarly to PDGF. This

CC sequence was isolated by screening a cDNA library from human umbilical

CC vein endothelial (HUVE) cells with anti-PDGF antibodies. CTGF can be

CC used to accelerate wound healing. Also, elevated levels of CTGF may be

CC diagnostic of proliferative diseases involving outgrowth of connective

CC tissue cells, such as cancer, fibrotic disease and atherosclarosis. All

CC of these diseases can be treated with reagents reactive with CTGF, such

CC as antibodies (which can also serve as assay reagents). Antisense

CC nucleic acids, and ribozymes could also be used to inhibit CTGF

CC production. The advantage with using CTGF is that it is more stable, and

CC factors involved in wound healing. This is believed to be due to the

cc high CVs content
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

Claim 20; Page 50-52; 76pp; English.

A CDNA clone (745360) codes for novel human connective tissue growt factor (CTGF) (W09089), a PDGF 'Immunorelated protein that may play significant role in the normal development, growth and repair of human tissue and which probably functions as a growth factor in wound healing. CTGF may be involved in diseases in which there is an overgrowth of connective tissue cells, such as cancer, tumour formation and growth, fibrotic diseases (e.g. pulmonary fibrosis, kidney fibrosis, glaucoma) and atherosclerosis. The CDNA clone was isolated from a HUVEC CDNA library using anti-PDGF antibody. CTGF

                                                                                                                                                                                               Ameliorating cell proliferative disorder associated with connective tissue growth factor - comprises the administration of an antibody which binds to connective tissue growth factor and not to platelet-derived growth factor platelet-derived growth factor growth factor associated with connective tissue growth factor (TGF). The method has been developed for ameliorating a cell proliferative cdisorder associated with connective tissue growth factor (TGF). The method comprises the administration of an antibody or its fragment that binds to CTGF and not to platelet-derived growth factor (PDGF), to the csite of the disorder. CTGF is related immunologically and biologically to PDGF. The present sequence encodes CTGF. The method is used to treat conditions involving the overgrowth of connective tissue cells such as cancer, atherosclerosis and other fibrotic diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nucleic acids can be used for recombinant prodn. of CTGF and as Probles to detect CTGF mRNA. CTGF genomic DNA (T58534) has also been isolated. A proliferative disorder may be treated using e.g. a CTGF antisense, ribozyme or triplex agent.

Use of connective tissue growth factor - for inducing bone, tissue or cartilage formation in a patient or for inducing wound healing bisclosure; Fig IC; 30pp; English.

This represents the genomic DNA sequence of connective tissue growth factor (CTGF). This can be used in the method of the invention for inducing bone or tissue formation that comprises administration to a patient, a composition comprising CTGF and a carrier. CTGF can also b

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      used in a method for inducing wound healing. The methods can be used for inducing bone, tissue or cartilage formation in disorders such as osteoporosis, osteoarthritis or osteochondrytis, arthritis, skeletal disorders, hypertrophic scars, burns, vascular hypertrophy, or in wound healing. The CTGF and functional fragments are more stable and less susceptible to protease degradation than platelet derived growth factor (PDGF) and other growth factors known to be involved in wound healing. Chaim 23; Page Fig 1C; 76pp; (M09089), a PDGF-immunocrelated protein tissue growth factor (CTGF) (M09089), a PDGF-immunocrelated protein that may play a significant role in the normal development, growth and repair of human tissue and which probably functions as a growth factor in wound healing. The gene was isolated from a human in the property using a partial gene fragment as probe. A CTGF CDNA clone (see also T45360) has also been obtd. The 5 nontranslated region of the CTGF gene functions as a transforming growth factor-beta (TGF-beta) inducible promoter. The TGF-beta regulatory element was identified (see also T49433) and can be used to identify cpds. the affect CTGF expression.

Claim 2; Fig 1A-B; 87pp; English.

Cractor-3 (CTGF-3) protein (see W37946), a novel member of the factor-3 (CTGF-3) protein (see W37946), a novel member of the growth factor superfamily. It was discovered in a cDNA library of the growth factor superfamily. It was discovered in a cDNA library of the gene has also been identified in cDNA libraries from ovary, testis, heart, lung, skeletal muscle of normal medulla, adrenal cortex, thymus, prostate, small intestine are vectors, host cells and recombinant methods for producing CC GTGF-3 polypeptides. CTGF-3 nucleic acid sequences or their fragments, e.g. primers or probes, can be used to diagnose diseases where CTGF-3 expression is enhanced, e.g. cancer, arthritis, CC decreased or increased such as in osteoporosis. Discorders characterised by candinistaring CTGT-1 and increased or increased levels of CTGF-3 can be treated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ractor beta. The gene may be incorporated into a vector and utilised in the prodn. of recombinant CTGF in prokaryotic or eukaryotic host cells, or used to design probes and primers. promoter region of the gene can be used in methods for the identification of cpds. which enhance the activity of CTGF, fi healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human connective tissue growth factor-3 gene. The chicken nov gene is stimulated in avian nephroblastoma induced by avian myeloblastoma virus but not in normal adult kidney. A 1975bp cDNA sequence was isolated from a gene bank prepared from chicken embryonic fibroblasts screened with a tumour-derived probe. Fragment II is derived from the nov gene; nucleotide sequences which hybridise to Fragment II under stringent conditions (i.e. 50% formamide, 5 x SCC) are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                T40206 standard; cDNA to mRNA; 1614 T40206;

A CDNA clone (T40206), corresponding to the crtL gene, codes for the lycopene syntase of tobacco cv. xanthii. It was isolated Cfrom a leaf cDNA library using the Synechbococcus lycopene synthase Cley gene (T40205) as probe. A tomato crtL cDNA (T40207) was Similarly isolated. Lycopene synthase genes can be used to control Ccarotenoid biosynthesis in bacteria, algae and plants, e.g. to Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional value (e.g. beta-carotene prodn.), Climprove nutritional valu
